

Filling the Feeder

Step 1: Press the one-touch button to open the cap.

Step 2: Fill using the 3N1 Super Tote and avoid spilling and wasting seed.

Step 3: Snap the cap shut and enjoy.

Cleaning the Feeder

Step 1: Turn the feeder over to remove the base.

Step 2: Locate the two long plastic tabs on the underside of the base and squeeze to disengage the locking features.

Step 3: Gently pull out the base.

Step 4: Hand wash all parts with warm soapy water. Allow to dry before use.

Step 5: Reinstall base by squeezing the tabs together and gently inserting into the bottom of the tube. Be sure the tabs on the base fully engage into the holes in the tube before filling with seed.

Bird Feeding Tips

Feed your birds year-round: Studies show birds are losing naturally occurring food sources, and will benefit from you feeding them all year long.

Location: At first, select a feeder location near a brush pile or shrubs to provide birds with a safer location (from predators) and a more natural feeding setting. Once birds have started feeding at your feeder, you can gradually move it to a desired viewing location. Remember to have some type of cover nearby for birds to hide from predators.

Hanging Your Feeder: Simply use a hanging hook—More Birds® Model #38028 or deck hook Model #38074. Make sure whatever you hook your feeder to is strong to support the filled weight of the feeder.

Storing seed: Keep seed in a dry, steel container that has a locking lid (to keep critters out).

Keeping Squirrels Away: Squirrels are attracted to most types of bird seed. Block them from your feeders by using a Bird Feeder Pole set (More Birds® Model #38128) and Squirrel Baffle (Squirrel X Model #38023). Or you can put out food for them that is easier to get to, rather than robbing your bird feeders.
